GitHub: github.com/arnavprajapati/
Portfolio: iamarnav.dev

E-mail: arnavprajapati3101@gmail.com
Mobile: +91-7235838950

SKILLS

• Languages:	Typescript, C++, JavaScript
• Frontend:	React, Redux Toolkit, Next.js, HTML5, CSS3, Tailwind CSS
• Backend:	Node.js, Express.js, REST APIs, JWT Authentication, RBAC, OAuth
• Databases & Caching:	MongoDB, PostgreSQL, MySQL, Redis, Vector Databases (Pinecone)
• Tools:	Git, GitHub, Docker, AWS (EC2), Vercel, Render, Motion, GSAP, Framer Motion
• Soft Skills:	Problem-Solving, Teamwork, Leadership, Adaptability
• Others:	API Integration, System Design Basics, Performance Optimization

EXPERIENCE

CampnAI – AI Agent Platform for Influencer Marketing <i>Internship – Full Stack Developer</i>	Jan’ 26 - Present
- Built an AI-powered influencer discovery platform using RAG architecture with Pinecone vector search, implementing a 5-factor weighted ranking model across 10,000+ influencer profiles. - Developed an autonomous multi-round email negotiation agent using Google Gemini, reducing per-negotiation effort by ~1.5 hours. - Architected a secure REST API with JWT + Firebase dual authentication and Redis-backed session management. - Implemented a distributed email processing pipeline using Firestore atomic transactions. Tech stack: Node.js, Express, Pinecone, Redis, Gemini, IMAP/SMTP, React	

PROJECTS

SmartKhata – AI Expense Manager GitHub Live	Dec’ 25 – Jan’ 26
- Built an AI-powered expense tracker using Gemini 2.0 that parses natural language and auto-categorizes transactions into 10 predefined categories — reducing manual expense logging from ~30s to under 3s per entry. Designed a digital Khata (lending/borrowing) system with partial payment tracking, settlement workflows (Pending → Partial → Settled), and person-wise balance aggregation using MongoDB pipelines and Levenshtein-based fuzzy name matching. Deployed a Telegram webhook bot with OTP-based account linking on AWS EC2 (PM2) and React dashboard on Vercel achieved 94+ Lighthouse performance with interactive spending analytics via Recharts. Tech stack: Node.js, Express, MongoDB, Redis, Gemini, Telegram Bot, React, Redux	
HealthLink-360 GitHub Live	Oct’ 25 – Dec’ 25
- Built HealthLink-360, a healthcare platform enabling medical report uploads, health metric tracking, and AI-driven personalized insights & risk assessments, along with appointment booking and secure doctor–patient communication. - Implemented multi-role access control with connection-based authorization and strict ownership validation, ensuring secure access across medical records and interactions. - Developed a Google Gemini-powered medical analysis module for structured data extraction, generating contextual summaries & health recommendations, and managed end-to-end appointment lifecycle with threaded clinical notes, goal progress tracking (decrease/increase/maintain/range), and Google Calendar OAuth2 integration. Tech stack: Node.js, Express, MongoDB, JWT, Google Gemini, Google OAuth, React, Redux	

CERTIFICATES

• Oracle Cloud Infrastructure AI Foundations Associate Link	April’ 26
• Frontend Developer (React) Certificate Link	Feb’ 26
• Privacy and Security in Social Media - NPTEL IIT Hyderabad Link	Nov’ 25
• AI for Everyone – DeepLearning.AI (Coursera) Link	Oct’ 23

ACHIEVEMENT

• Solved 150+ LeetCode problems focusing on data structures and algorithms to improve problem-solving and coding efficiency.
--

EDUCATION

Lovely Professional University <i>Bachelor of Technology - Computer Science and Engineering; CGPA: 7.69</i>	Punjab, India Jul’ 23 - Present
Dr. AK Public School <i>Intermediate; Percentage: 77.2%</i>	Meeranpur, Akbarpur Jun’ 21 – Apr’ 22
Dr. AK Public School <i>Matriculation; Percentage: 81.6%</i>	Meeranpur, Akbarpur Jun’ 19 - Apr’ 20
